

## Type-Approval Procedure

### Information System of the German Type-Approval Authority

**Not examined English translation!**  
**Valid is only the German-language original!**

Directive 71/320/EEC - braking devices;  
- Specification of wheel/tire combination in the information document

Question or problem:

Amending Directive 98/12/EC has adapted the information document of the vehicle referred to in Annex XVIII to Framework Directive 70/156/EEC. As a result, section 6.6 now requires extensive information on tires and wheels, which are of secondary importance with regard to the braking devices.

This leads to an increase in additions to braking device approvals that become necessary solely because of minor changes in the wheel/tire combination.

Result:

Following the evaluation of the tire data relevant for braking devices and of the information required for the granting of system approvals according to Directive 71/320/EEC, it is deemed sufficient if at least the following information is included in the information document referred to in Attachment XVIII:

6.6 Tires and wheels

6.6.1 Tire and wheel combination(s) "in accordance with the limits specified in Paragraph 6.6.2."

6.6.2 Upper and lower limit of rolling radii (specification per axle only required if values are different for the individual axles): .....mm

6.6.3 Tire pressure(s) as recommended by the vehicle manufacturer: max. .... kPa

6.6.5 Brief description of temporary-use spare unit, if any: .....
