

## Type-Approval Procedure

### Information System of the German Type-Approval Authority

#### **Completion of the data transmission according to Regulation (EU) 2021/392**

##### Question or issue:

From 25th March 2021 onwards, for the vehicles referred to in Regulation (EU) 2021/392, the data according to Table 2 of the Annex to this Regulation are to be collected and reported to the European Commission for each Type 1 emission test according to Annex XXI of Regulation (EU) 2017/1151. The required data are to be collected from the dynamometer or the OBD during the Type 1 test in accordance with Regulation (EU) 2021/392, and the remaining data are to be completed according to the specifications of the manufacturer. This procedure is hereinafter referred to as Type 1 reporting.

This information letter determines the conditions according to which the procedure can be carried out by the defined technical service instead of the Kraftfahrt-Bundesamt (KBA) (*Federal Motor Transport Authority*).

##### Outcome:

According to Section 4, Article 14 of Regulation (EU) 2021/392, the type-approval authority shall ensure that the data for the Type 1 reporting are recorded and stored in encrypted form on a designated server of the European Commission.

The technical service can carry this out instead of the KBA insofar as the following conditions are fulfilled:

- The technical service presents its intended procedure to the KBA and submits a process description concerning the recording and storage of the Type 1 reporting data to the KBA for approval.
- The complete package of data must be submitted to the KBA with the application for the issuing of the emission type-approval. This includes the input values and the acknowledgment of receipt from the designated server of the European Commission (in the form of a reply).
- The conformation of the proper completion of the Type 1 reporting and the number of the reply from the designated server of the European Commission are to be stated in the Test Report.
